Sherwood Island State Park
Westport, CT

As Project Manager, Thomas Tavella worked with the State of Connecticut Department of Public Works, the Department of Environmental Protection State Parks, and the Office of Long Island Sound Programs in the development of a 2,000-car parking lot, new access road and ticket booth plaza for Sherwood Island State Park. Using innovative drainage designs to minimize the effects on the existing sensitive tidal marsh and wetlands, Tavella incorporated porous pavements, biofiltration swales, and native plantings throughout the site. A Class A bike trail was also incorporated to tie Sherwood Island into the existing Westport bike system.
